WHO WE ARE

Technology with purpose.

BI Technology is a Riyadh-based technology company focused on developing AI solutions, custom software and business applications.

Established in 2024, we work with organizations to turn requirements into usable systems. Alongside tailored development, we offer our own products for customer management, enterprise operations, retail, education, hospitality and automotive services.

01

Our Mission

Build intelligent, practical software that addresses real operational challenges and creates lasting value for our clients.

02

Our Vision

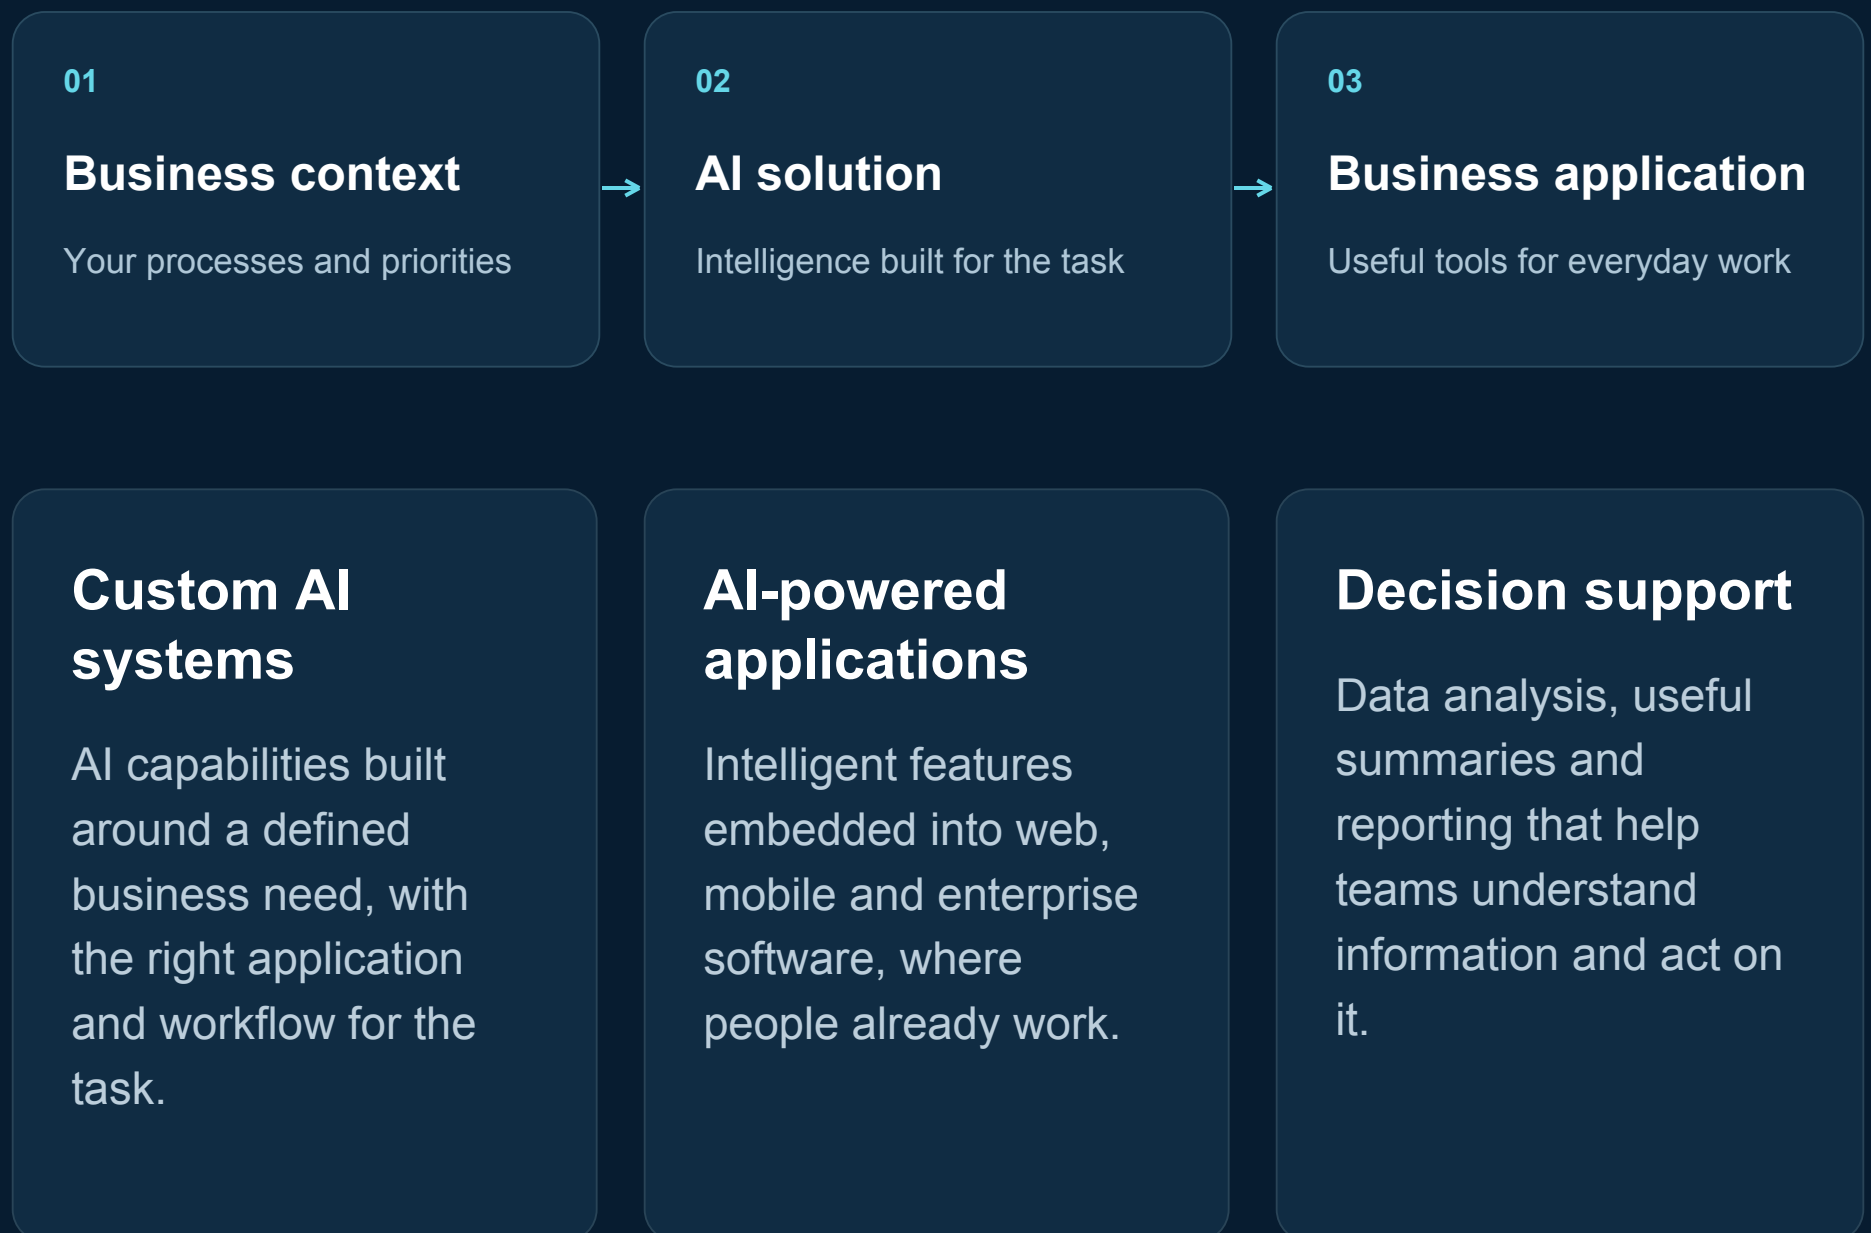

Become a trusted AI and software development partner for organizations shaping the future of business in Saudi Arabia and beyond.

OUR PRIMARY FOCUS

We build AI solutions.

From a business challenge to a working AI solution: designed around your requirements and integrated into the way your organization operates.

Explore our software and AI services

AI INTEGRATION & AUTOMATION

Intelligence inside your operations.

Connect AI with the systems, information and workflows that already support your business.

Integrate your platforms

Connect applications, third-party services and business information through APIs.

Reduce manual work

Build automation around repetitive tasks, handoffs and operational follow-ups.

Make information useful

Bring analysis and reporting closer to the decisions your teams make.

Keep the business in control

Shape workflows around roles, approvals and the needs of the people using them.

CUSTOM SOFTWARE DEVELOPMENT

Built around your business.

Software should fit your operations. We design and develop tailored systems around your requirements, workflows and users.

01

Business applications

Purpose-built systems for managing services, customers, transactions and day-to-day operations.

02

Enterprise & ERP systems

Connected finance, sales, inventory, HR and operational workflows in one coordinated platform.

03

SaaS & cloud platforms

Web-based products and platforms designed for ongoing use, growth and integration.

04

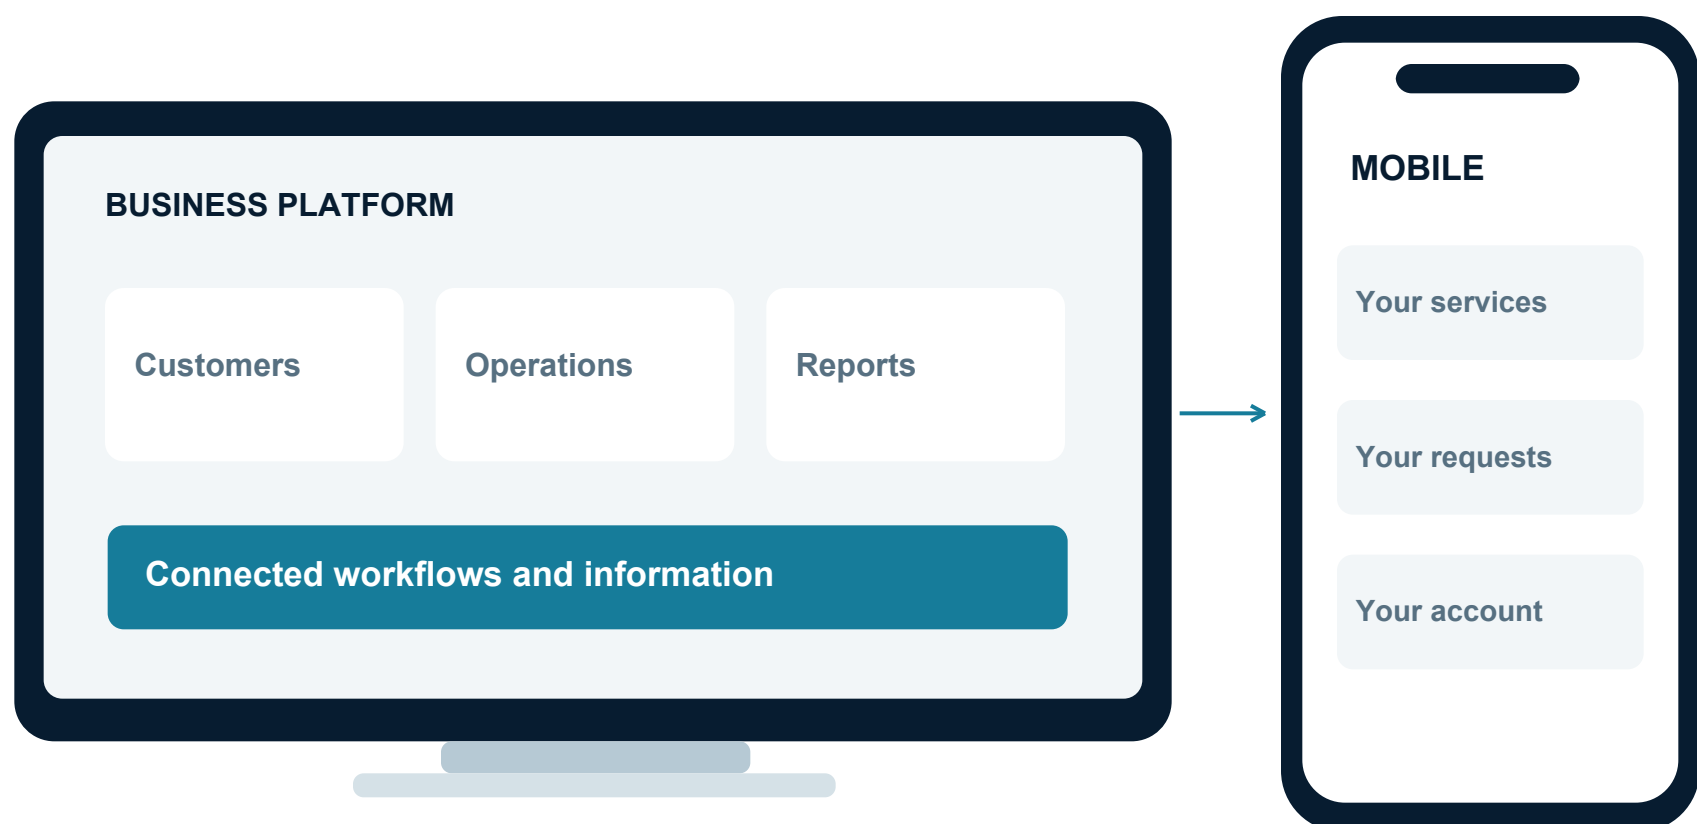

Dashboards & reporting

Clear views of operational information, tailored to the teams that need it.

Your requirements. Your workflows.
Software that brings them together.

One connected experience.

Build digital experiences that connect your customers, employees and business platforms.

Web platforms

Business portals, e-commerce and customer-facing applications.

Mobile apps

iOS, Android and cross-platform experiences for customers and teams.

Integration

API integration, payment gateways and Arabic/English interfaces.

OUR DELIVERY APPROACH

From requirements to a working solution.

A clear path from understanding the challenge to building, validating and supporting the software.

01

Discover

Understand the business challenge, users and requirements.

02

Design

Define the solution, user experience and integration needs.

03

Build

Develop the application and connect its required systems.

04

Validate

Test functionality and review the solution against agreed requirements.

05

Launch & support

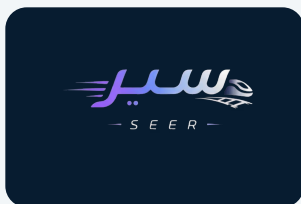

Deploy, onboard users and support the software as it evolves.

BUILT BY BI TECHNOLOGY

OUR PRODUCTS / BUSINESS CRM

Seer

Every customer. One connected journey.

A business CRM for Saudi companies, bringing leads, customer records, follow-ups, invoices and service activity into one organized workflow.

- **Customer visibility**

Keep a complete customer profile and a clear view of relationship history.

- **Connected service**

Follow the customer journey from first enquiry through ongoing service.

- **Sales & follow-up**

Track enquiries, lead ownership and the next action through the pipeline.

- **AI guidance**

Support daily decisions and capture useful context from customer interactions.

Product information: b-it.co/en/seer

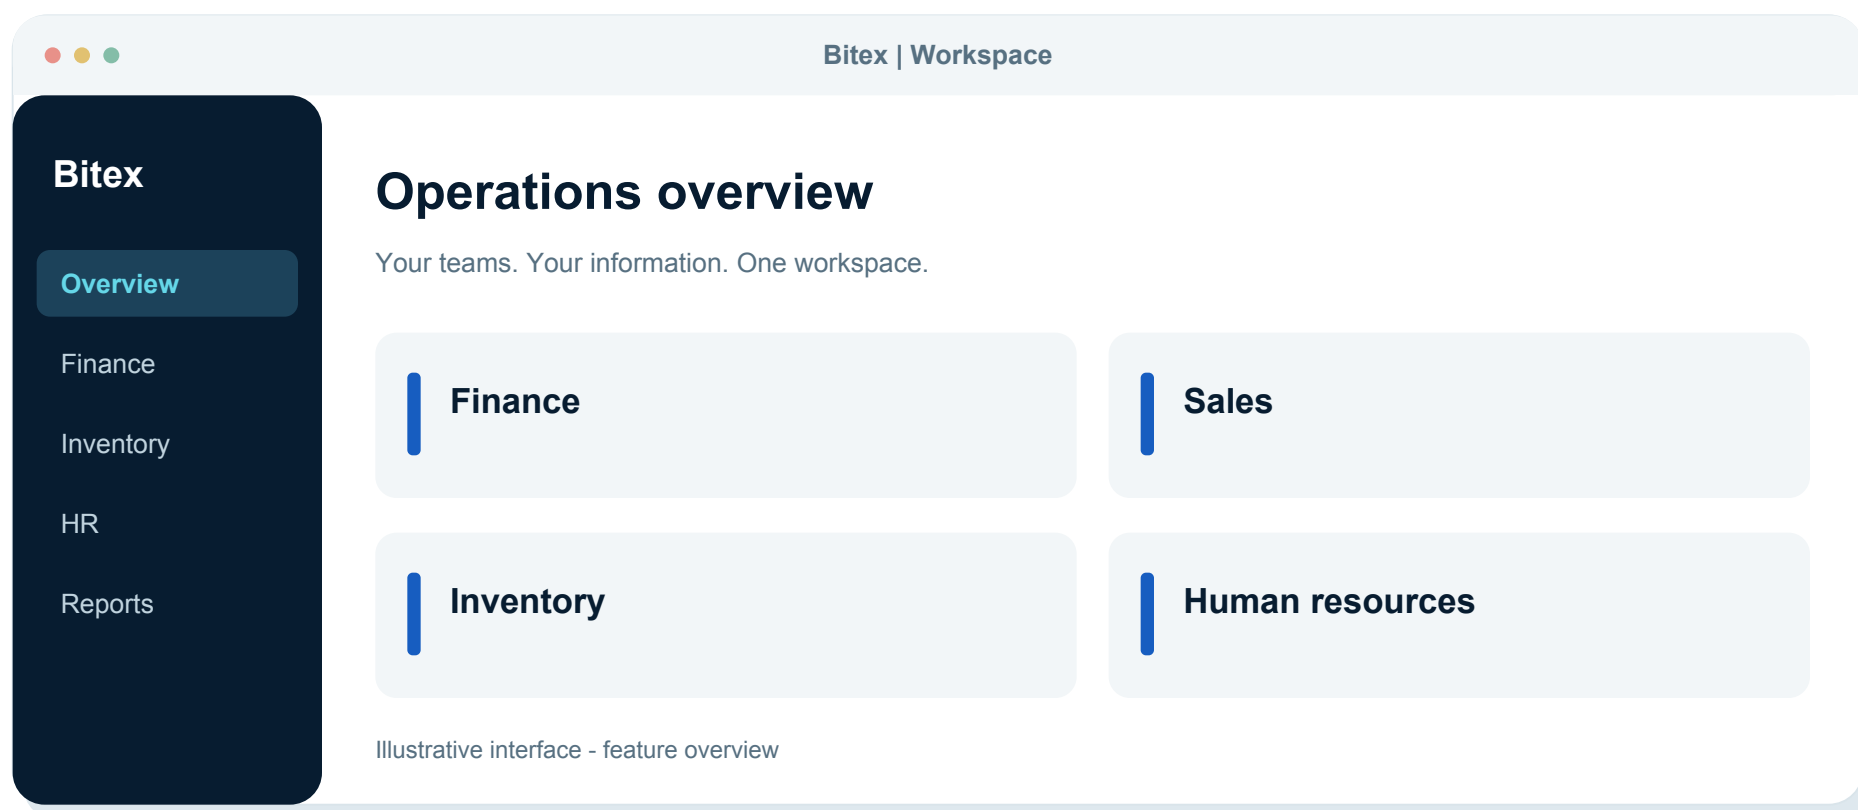

OUR PRODUCTS / ENTERPRISE RESOURCE PLANNING

Bitex

Your business, working as one.

An integrated ERP platform connecting finance, sales, purchasing, inventory, manufacturing, projects, HR and payroll.

- **Connected departments**

Bring core functions together with shared information and reporting.

- **Flexible configuration**

Support multiple companies, currencies and Arabic/English interfaces.

- **Operational control**

Coordinate purchasing, stock, production and project activity.

- **Workflow & integration**

Configure approvals, user permissions and connections to external systems.

Product information: b-it.co/en/bitex

OUR PRODUCTS / INVENTORY MANAGEMENT & POINT OF SALE

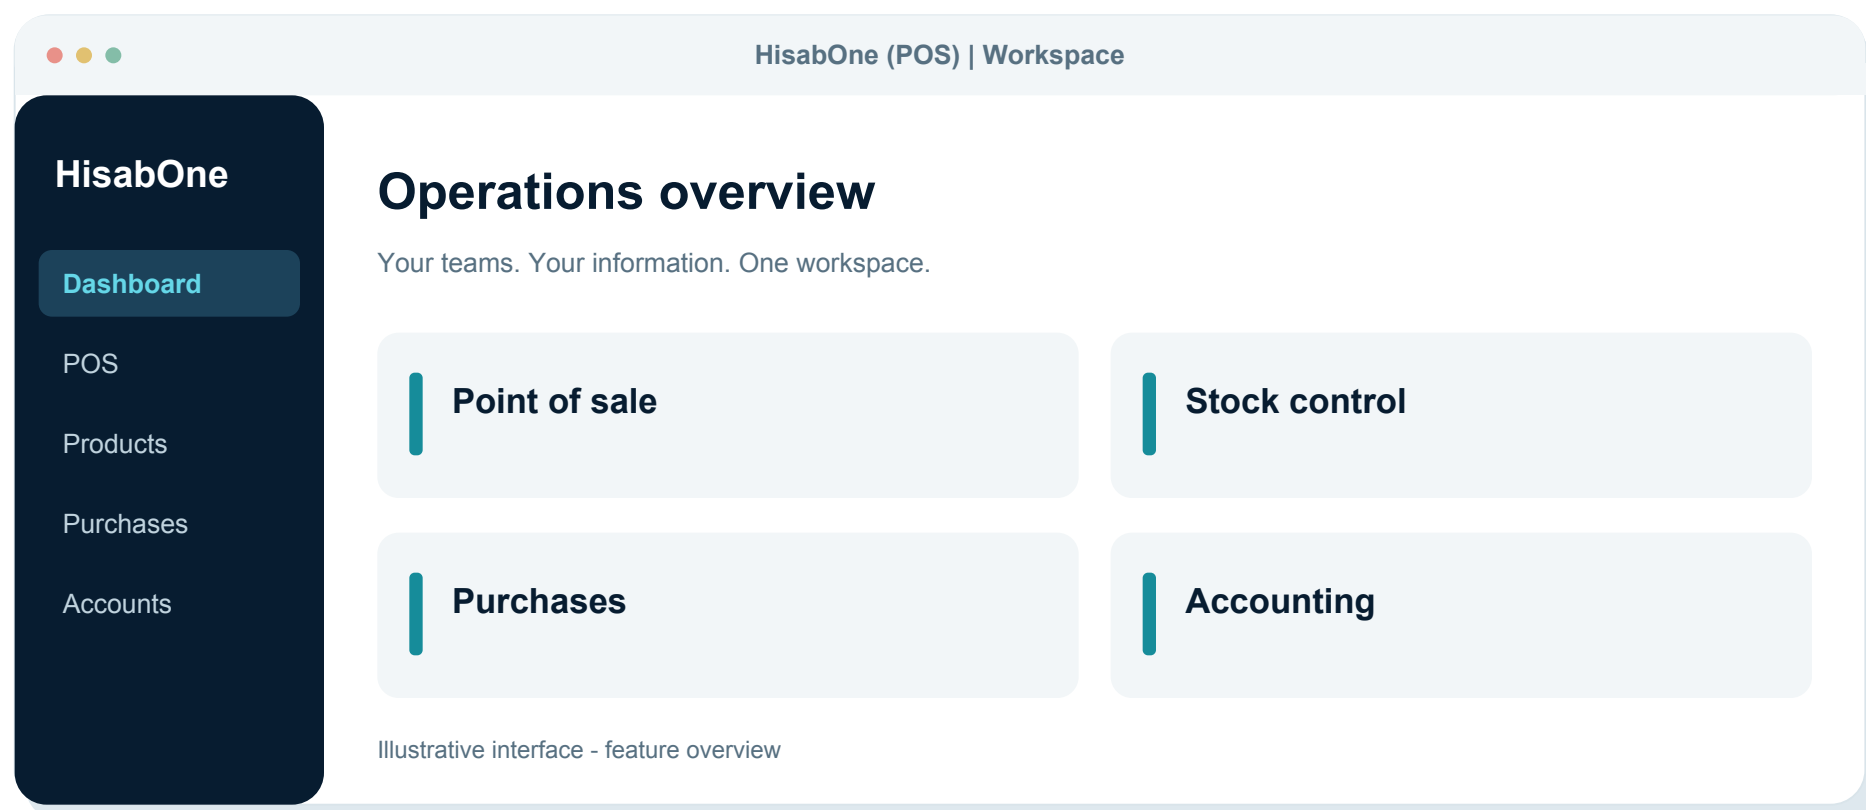

HisabOne (POS)

HisabOne

POINT OF SALE

Sales, stock and accounts. In one place.

An all-in-one platform for inventory, sales, purchasing, POS, accounting and people management, with self-hosted deployment available.

- **Stock management**

Manage warehouses, product variants, batches and expiry information.

- **Business administration**

Bring accounting, payroll and attendance into the same environment.

- **Sales & purchasing**

Connect point of sale, customer transactions and supplier purchasing.

- **Retail connections**

Support barcode hardware, e-commerce and WooCommerce integrations.

Product information: b-it.co/en/hisab-one

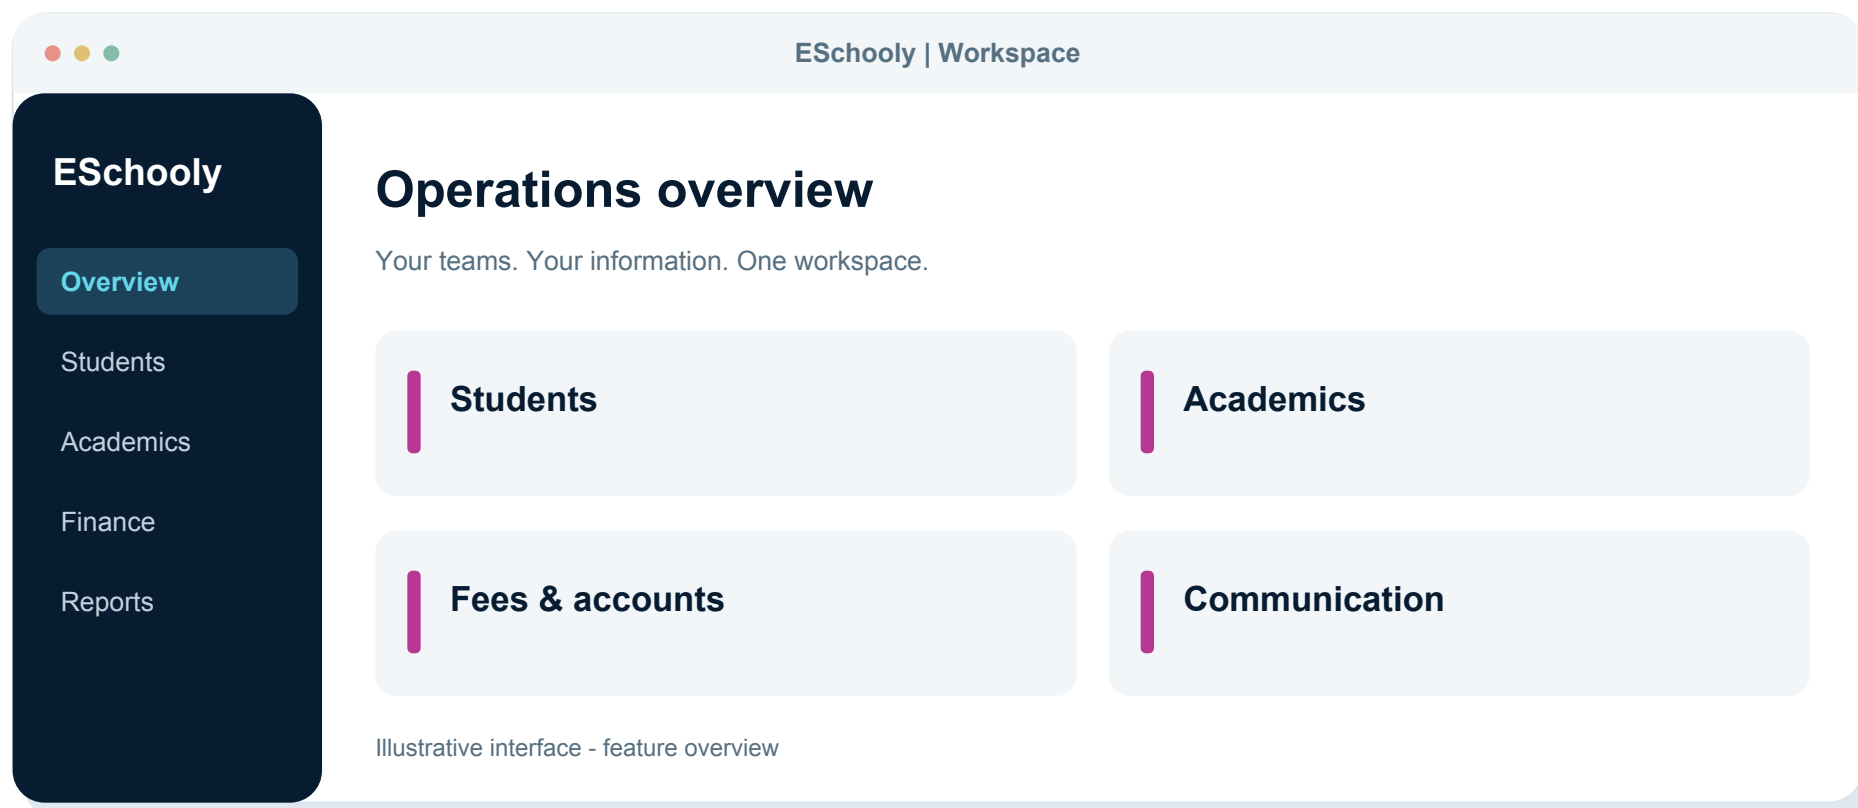

OUR PRODUCTS / SCHOOL MANAGEMENT & ERP

ESchooly

A connected school. A clearer school day.

A school management platform that brings students, staff, academics, finances and communication into one system.

- **Students & academics**

Manage student profiles, examinations, results and academic processes.

- **School resources**

Organize library, inventory, transport and dormitory information.

- **Finance & staff**

Coordinate fees, accounts, HR and payroll.

- **Communication & insight**

Use notifications, reports and multilingual interfaces across the school.

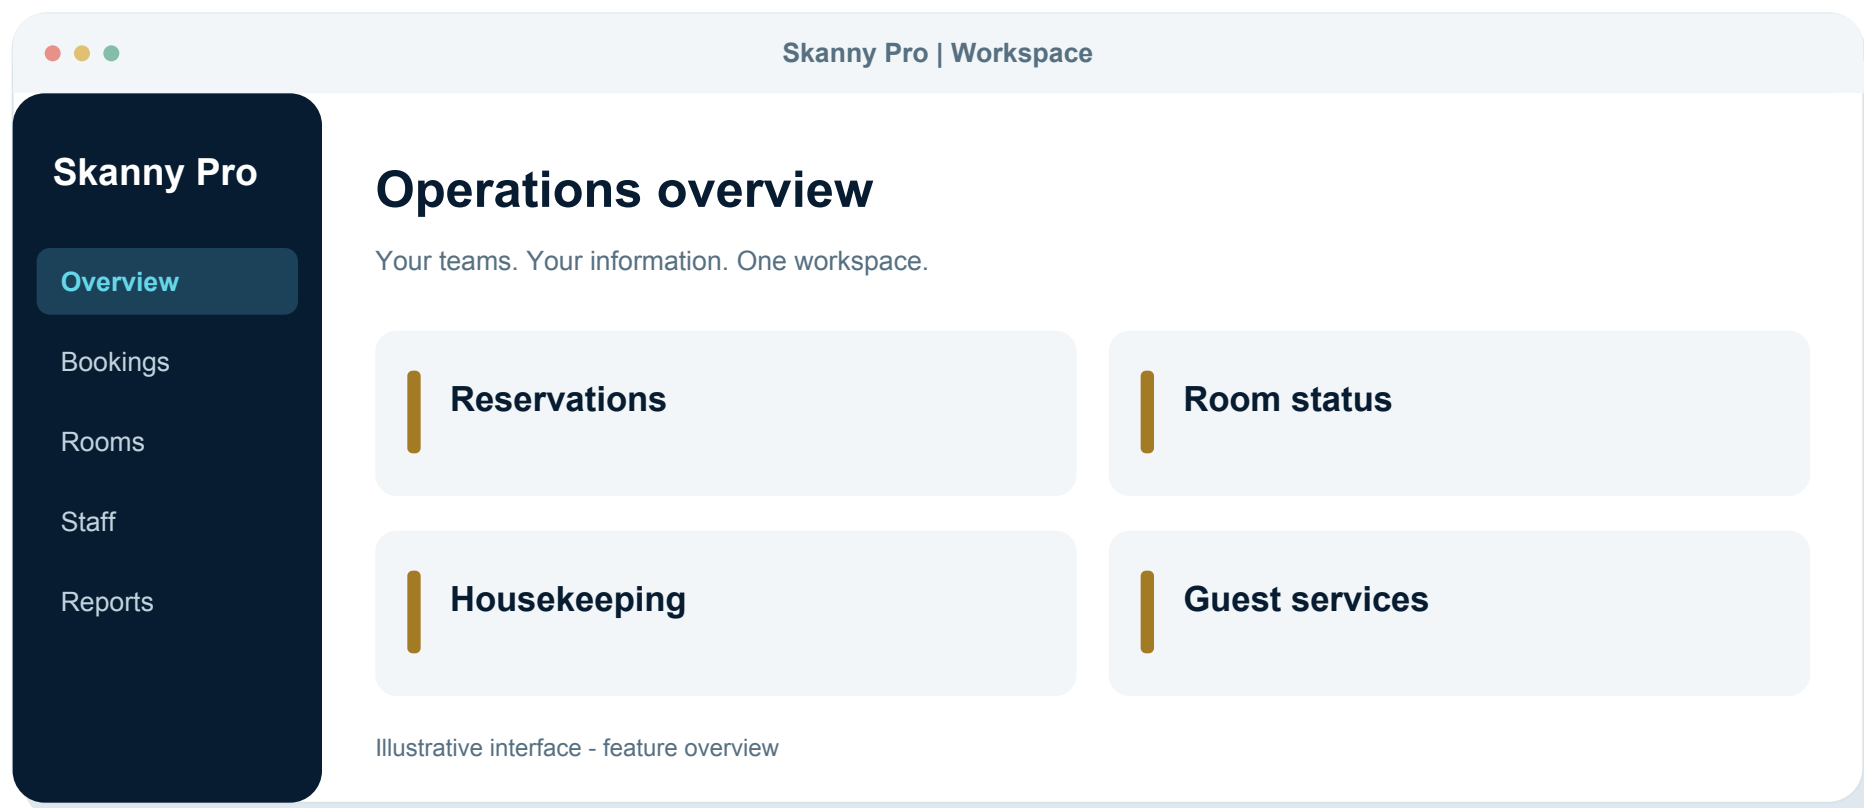

Product information: b-it.co/en/eschooly

Skanny Pro

Connected hospitality. From booking to operations.

A hotel management platform combining reservations, rooms, staff operations and internal communication.

- **Bookings & rooms**

Manage reservations, guest records, availability and room status.

- **People & collaboration**

Organize staff information, roles and internal communication.

- **Housekeeping**

Coordinate room cleaning and maintenance workflows.

- **Operational insight**

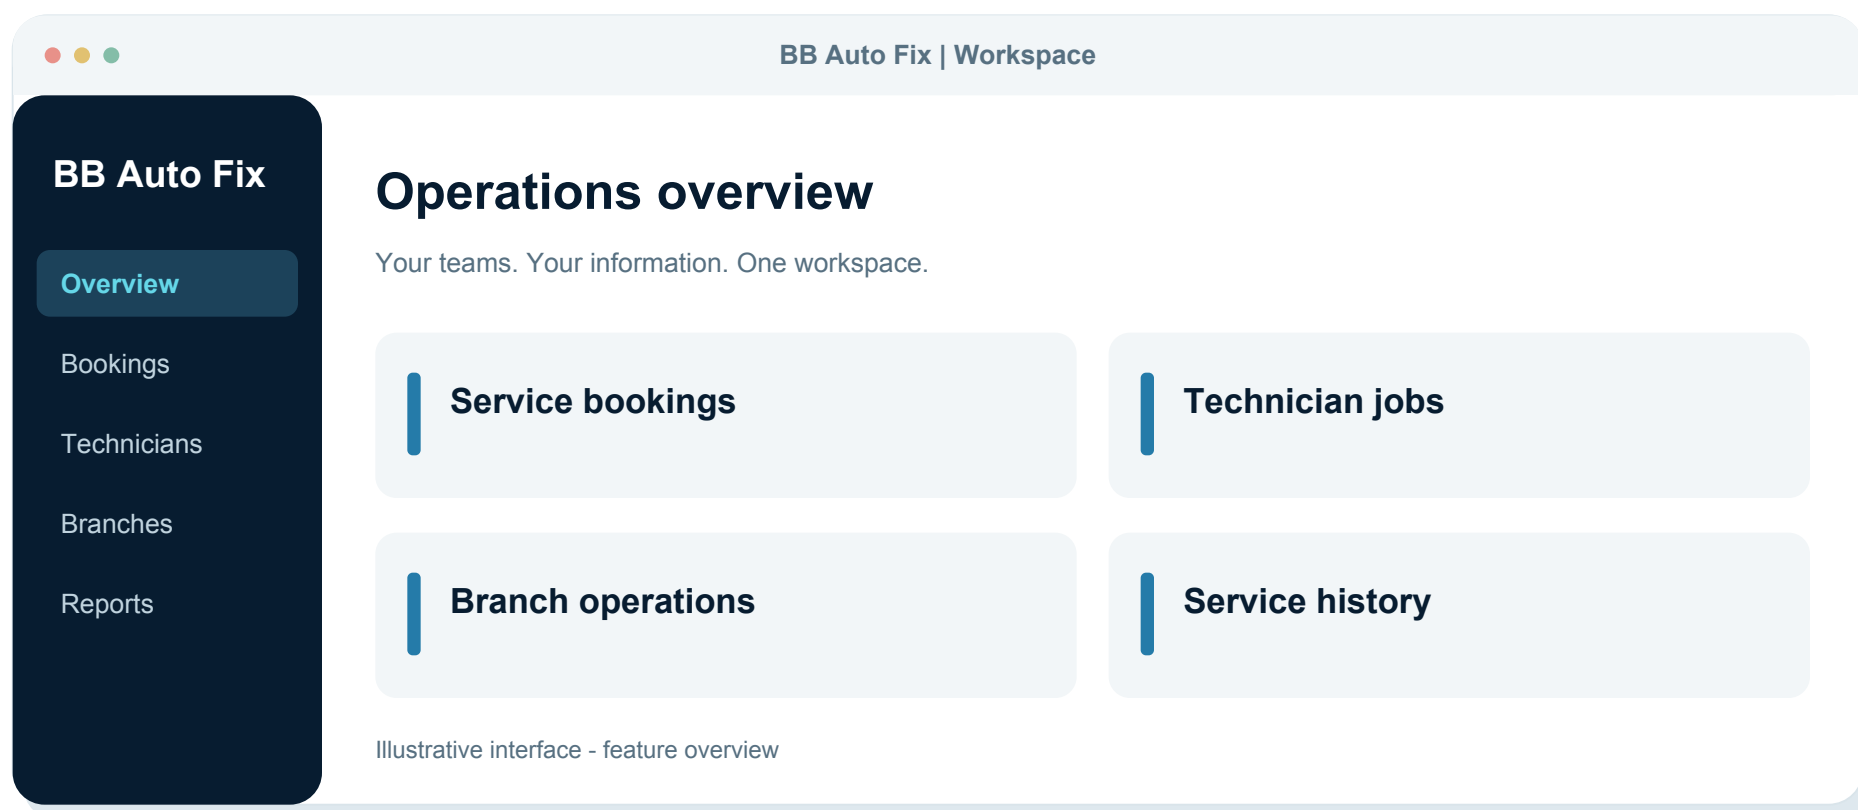

Use booking and revenue reporting, with multi-property options by plan.

BB Auto Fix

Service operations. Connected end to end.

A car-service platform connecting customers, technicians, branches and head-office operations through web and mobile tools.

- **Customer experience**

Provide bookings, GPS roadside assistance, tracking and service history.

- **Branch management**

Manage services, appointments, pricing and basic inventory.

- **Technician workflow**

Assign jobs, share navigation details and record progress and service notes.

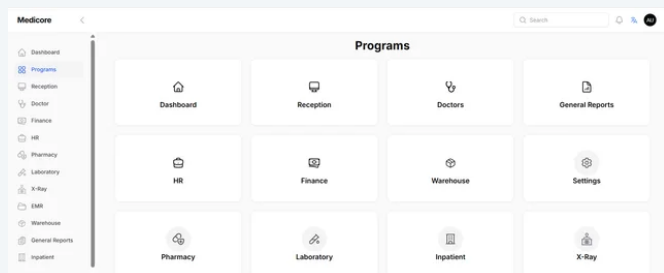

- **Central oversight**

Coordinate branches, roles and reporting through a head-office panel.
